Targeting your Audience

- **Utilize Student Societies/Clubs/Groups**
  - Partner with any relevant societies, clubs and groups that can help spread the word about your Hackathon to their members.
- **Department Head/Professors**
  - If there is a specific department (Eg. Mathematics) that you would like to attend the Hackathon, reach out to the Head of that Department and the professors to see if they can spread the message for you to their classes.

Promotional Channels

- **Website**
  - Does your campus/company have a list of events on their website? Can you add a link to the Hackathon on there?
- **Social Media**
  - Does your campus/company have social media channels where you can advertise the hackathon and link to the website?
  - Share some of the posts made about the Hackathon on your own social channels to help spread awareness. Short videos often work well.
- **Posters**
  - Customize the Poster templates and put them up around campus where your target audience will see them. Create a unique QR code so that it links to your event.
- **Newsletter**
  - Are there any newsletters/communications that are sent to prospective participants? Does your school/organization have a newsletter?
- **Prior events**
  - Are there any other events on campus happening where you could add a slide or agenda item about the hackathon?
- **Pre-event workshop**
  - If you have the opportunity and technical bandwidth you could run a pre-event workshop. This is a good way to introduce some relevant concepts and promote your event
